

We also provide the following CCIE Courses

CCIE Certification in the Security Course Code 1123

CCIE Certification in the Service Provider Course Code 1124

CCIE Certification in the Voice Course Code 1125

A must for Cisco Guru!!!

CCIE certification in Routing and Switching

Course Code 1122

Objective

This intensive, hands-on course is designed specifically to prepare you for the CCIE Routing and Switching Lab Exam. Taught by CCIE-certified instructors, this course will expose you to network situations you're likely to experience on the exam. You'll learn the technologies, become familiar with Cisco's testing techniques, and discover our unique methodology for preparing for the exam. Assess your **strengths and weaknesses** by testing your knowledge on exam topics such as advanced 3550 and 3560 configurations, **OSPF, BGP, EIGRP, RIPv2, redistribution, and route filtering**. Since this course does not cover introductory material, **you should have CCNP-level knowledge of the topics covered, and you should have passed the CCIE Routing and Switching Written Exam 350-001**.

We use a combination of lecture, chalk talk, one-on-one mentoring, and hands-on labs to create a unique experience. You will have access to your own equipment where you'll perform two complete mock labs that you won't find with any other training provider.

Course Facts

- Configure advanced Catalyst IOS features
- Configure advanced Frame Relay features
- Use advanced IGP features and IOS commands
- Configure complex BGP policies with different attributes
- Configure complex redistribution tasks
- Deploy and troubleshoot advanced BGP filters
